

# Construção Monitoramento Nobreak DC – Arduino

Pessoal, estou desenvolvendo o monitoramento do nobreak DC.

Para o protótipo eletrônico usei a plataforma open do Arduino e o ethershield oficial.

Nesse protótipo, montei 3 leituras analógicas e uma saída digital.

Desenvolvi o software de interface web, que irá apresentar os dados numa pagina da internet.

Como ainda não estou preso a nenhuma ideia fixa, aceito sugestões e peço muito que respondam minha enquete!

Estou ainda organizando como será o software que irá monitorar vários nobreaks DC.

Eu penso que será interessante disponibilizar em cada nobreak um pagina XML com as informações e o usuário monta o seu script que irá ler esses dados e armazenar ele no seu servidor, porém também existe a ideia de que possa existir um software próprio que irá coletar esses dados e armazenar essas informações nele mesmo, gerando relatórios e etc e existe ainda a possibilidade de dentro da pagina web dele se possa configurar alertas que serão disparados para e-mail, previamente cadastrados conforme a mudança de algum estado(Tipo falta de luz, alarme, tensão na bateria).
